

WORLD TOILET DAY

On World Toilet Day, we acknowledge

How essential accessible toilets are for good health and hygiene.

40%

(more than 4.2 billion people)

of the global population don't have access to safe sanitation.

In 2013, more people in the world had access to a cell phone than to a toilet.

The UN has observed

WORLD TOILET DAY

November 19th since 2001

World Toilet Day Aims

aims to achieve healthy water and sanitation for all by 2030.

3.6 billion

people experience environmental water scarcity at least one month every year which is a leading cause of poor sanitation.

Safe sanitation could save

350,000+

children's lives every year.

Safely reusing wastewater can help combat the effects of climate change.
